

Codeless Architecture Powered by Unqork for Insurance

Codeless Architecture is a new open standard that empowers organizations to build complex software without writing, managing, or seeing a line of code

Who we are

Unqork created the new category of enterprise no-code and invented the Codeless Architecture standard that is the future of software development. Our mission is to enable our customers to create applications that power their businesses. With our platform, customers innovate faster and with greater agility, all at a lower cost.

What we do

We have entered a new frontier of software development and it's codeless—Unqork is the first company to entirely abstract code from the application development process. Our platform is built on the premise of Codeless Architecture, which allows clients to build applications that are visual, modular, and secure. Codeless Architecture provides the foundation for organizations to stay agile

and accelerate their business into the future where customer and employee expectations are higher than ever, all without using code.

Codeless Architecture is an open standard that abstracts application development and frees organizations from the cost & complexity of managing software so they can focus entirely on building business value. Development cycles for enterprise applications are measured in weeks, rather than in months or years, with no legacy code to maintain over time.

How we help

Integrate all of your systems and data, orchestrate and automate complex business processes, and create modern on-brand customer experiences.

Codeless Architecture Powered by Unqork

Integrate your entire ecosystem

- Seamlessly integrate new custom codeless applications with your legacy systems (including those developed with code) and external third-party integrations
- Leverage Unqork's ecosystem of pre-built integrations with leading InsureTechs and an expansive library of industry-specific accelerators for specific use cases

Automate complex workflows

- Unqork's unified platform makes it easy to orchestrate highly automated workflows using Unqork's native business logic, rules, and calculation capabilities
- Role-based access control (RBAC) allows you to scale controlled access to specific teams, clients, and service providers

Create consumer-grade experiences

- Deploy consumer-grade experiences to attract and delight your customers Gain scalability with reusable UI templates and the flexibility to leverage custom styling where needed

Enterprise-grade security

- SDLC governance, security, roles, and permissions that meet enterprise standards; Soc 2 Type II, Privacy Shield compliant

Build flexible enterprise applications across the entire client lifecycle 3x faster and at 65% lower runtime TCO
