

Capability Statement

unqork

CAPABILITY STATEMENT

Unqork Government has achieved Federal Risk & Authorization Management Program (FedRAMP®) Authority to Operate at the Moderate Impact Level, giving agencies the ability to confidently and securely develop applications on Unqork's revolutionary codeless platform.

Unqork was designed to support a Codeless Architecture and empowers agencies to flexibly adjust their digital infrastructure and eliminate the complexity and cost of traditional, code-based development.

We understand the pressure to move fast, while also having to comply with evolving regulations as well as security and privacy mandates. We can help get you there. Codeless Architecture powered by Unqork Government frees agencies from IP lock-in with an open-standard paradigm that empowers enterprises to master composability and modernization.

Just as agencies routinely tap cloud providers (e.g., AWS, Microsoft Azure, Google Cloud) to abstract their physical cloud infrastructure into a configurable dashboard, Unqork for Government abstracts the application technology stack into configurable visual components representing user-facing elements, application logic, and integrations. Robust applications are developed, iterated, and managed in a completely visual UI.

With decades of collective experience in financial services, insurance, and government, Unqork enables organizations to integrate all of their systems and data, orchestrate and automate complex business processes, and create modern, intuitive user experiences, with end-to-end governance, security, roles, and permissions that meet enterprise standards and compliance.

We are the first no-code platform for the enterprise designed to support Codeless Architecture, which enables you to rapidly build and effectively manage complex applications without writing or seeing a single line of code. Unqork's platform can support any number of use cases that are crucial in Federal agencies, including:

- Case management
- Ethics management
- Compliance management
- Citizen outreach
- Regulatory compliance
- Audit Management
- Continuous authority to operate & risk management
- Congressional tracking & controlled correspondence
- Inspection management
- Human capital management
- HR onboarding & offboarding
- Source selection automation
- Emergency preparedness & communication
- Employee engagement
- Claims & loan tracking management
- Web self-service
- Event tracking & management

CONTRACT VEHICLES

Like most enterprise product companies, we do not hold any contracting vehicles. Federal Agencies can procure our platform through a network of partners and resellers. Our partners and resellers hold a variety of contracts, including (but not limited to):

- GSA IT-70
- 8(a) STARS II
- NASA SEWP
- CIO-CS

Capability Statement

unqork

To make it even easier for Federal Agencies, we have made sure that our partner and reseller network includes certified small businesses, including 8(a), SDVOSB, HUBZone, and WOSB. This allows for multiple paths to easily procure our platform.
